

Region and Availability Zone

Region

region is a **geographical area where AWS has clusters of data centers.**

Each region is **completely independent and is designed to be isolated** from the other regions

Each **Region** have multiple availability zone

All Region are connected to the Ocean Wire .

Every Region have their own code name

Aws have 200+ services

Availability Zone

Each Region have 3 three Availability zone

All Availability zone are distance to each other around 100km

AWS customers can deploy their resources (such as EC2 instances, databases, and storage)

Each Availability Zone have their own code

Local Zones are designed to support workload millisecond latencies
