

SNS (Simple Notification Services)

- SNS is a fast flexible ,fully manages , push notification services
- It is a web services that co-ordinate and manage the delivery or Sending of message to the subscribing end points or clients
- It allow individual message or fan-out message to a large number of Recipients or to others distributed aws services
- Message publish to an SNS topics will be delivered to the subscriber Immediately
- Inexpensive pay as you go model no upfront cost
- Reliable at least three copies of the data store across multiple AZ in region
- It is a way of sending message when you are autoscaing , it triggers as sns

Services , which will email you that your ec2 instance is growing

- Publisher
 - Sns topic
 - Lambda
 - Sqs
 - http/s
 - email
 - sms
- Publisher => publisher are also know as Producer that produce and send the message to the sns which is a logical access point
- Subscribers => subscribers such as web server email address ,amazon,
 - Sqs queue , AWS lambda receive the message or notification from the sns over one of the supported protocol

Step 1

The screenshot shows a Google search for 'aws'. The search bar at the top contains 'aws'. Below the search bar, there are tabs for 'All', 'Images', 'News', 'Videos', 'Shopping', 'Maps', 'Books', and 'More'. The 'All' tab is selected. The search results are divided into two main sections: 'Sponsored' and 'Here's more on aws'.

Here's more on aws

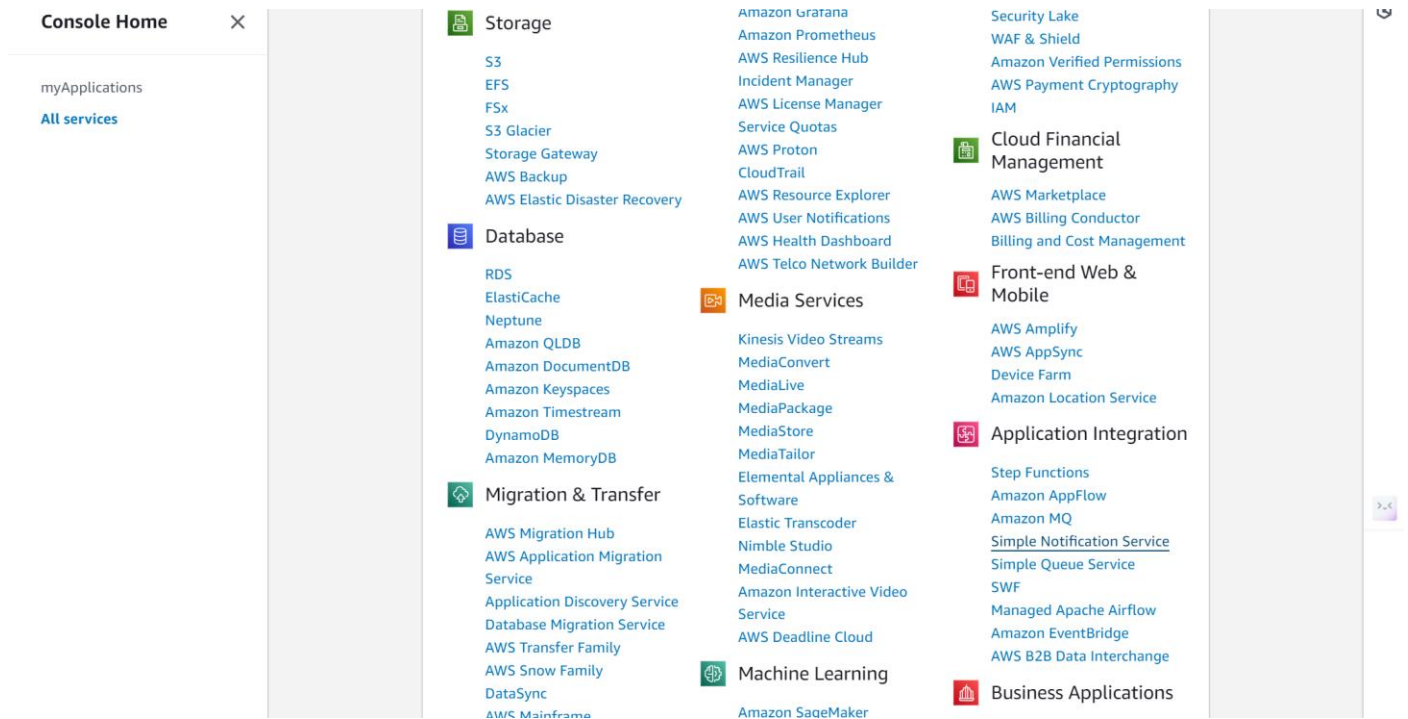

AWS stands for Amazon Web Services, a comprehensive cloud computing platform provided by Amazon. It offers a wide range of services for computing power, storage, databases, analytics, machine learning, and more. These services can be used to build, deploy, and manage applications and workloads in a virtual environment. AWS provides scalability, flexibility, and reliability, making it a popular choice for businesses and individuals alike. With AWS, users can access a vast array of tools and technologies, such as Amazon S3 for storage, Amazon EC2 for computing, and Amazon RDS for databases, among others.

Note: AI responses might not always be perfect. It's a good idea to double-check the information.

Topic ARN

arn:aws:sns:ap-south-1:565435440617:testapp

Protocol

The type of endpoint to subscribe

Email

Endpoint

An email address that can receive notifications from Amazon SNS.

codershukr321@gmail.com

After your subscription is created, you must confirm it. [Info](#)

► **Subscription filter policy - optional** [Info](#)

This policy filters the messages that a subscriber receives.

Step 8 congratulations our subscription created

The screenshot shows the Amazon SNS console interface. On the left is a navigation menu with 'Dashboard', 'Topics', 'Subscriptions', and 'Mobile' sections. The main content area displays a 'New Feature' banner at the top, followed by a green success message: 'Subscription to testapp created successfully. The ARN of the subscription is arn:aws:sns:ap-south-1:565435440617:testapp:436674cf-4714-48ba-914a-d3277ead3d34.' Below this, the breadcrumb path is 'Amazon SNS > Topics > testapp > Subscription: 436674cf-4714-48ba-914a-d3277ead3d34'. The subscription title is 'Subscription: 436674cf-4714-48ba-914a-d3277ead3d34' with 'Edit' and 'Delete' buttons. A 'Details' section contains a table with the following information:

ARN	arn:aws:sns:ap-south-1:565435440617:testapp:436674cf-4714-48ba-914a-d3277ead3d34	Status	Pending confirmation
Endpoint	codershukr321@gmail.com	Protocol	EMAIL
Topic	testapp		
Subscription Principal	arn:aws:iam::565435440617:root		

Below the details are tabs for 'Subscription filter policy' and 'Redrive policy (dead-letter queue)'. The 'Subscription filter policy' tab is active, showing a message: 'This policy filters the messages that a subscriber receives.' and a note at the bottom: 'No filter policy configured for this subscription.'

Step 9 : now we receive a subscription Verification mail on our Gmail

See the status

This screenshot shows the same Amazon SNS console page as before, but the subscription status has changed. The 'Status' in the details table is now 'Confirmed' with a green checkmark icon. The 'Subscription filter policy' tab is still active, showing the same message and the note 'No filter policy configured for this subscription.'

The same payload is sent to endpoints subscribed to the topic, regardless of their delivery protocol.

☐ **Custom payload for each delivery protocol.**
Different payloads are sent to endpoints subscribed to the topic, based on their delivery protocol.

Message body to send to the endpoint

1 My name is Ashutosh kumar , i am a mern stack developer , see you soon bye...👋

Step 14 : our message publish

The screenshot shows the Amazon SNS console interface. On the left is a navigation menu with options: Dashboard, Topics (selected), Subscriptions, Mobile, Push notifications, Text messaging (SMS), and Origination numbers. The main content area displays a green notification banner at the top stating "Message published to topic testapp successfully." with message and request IDs. Below this, the breadcrumb path is "Amazon SNS > Topics > testapp". The "testapp" topic page has buttons for "Edit", "Delete", and "Publish message". Under the "Details" section, a table lists the following information:

Name	Display name
testapp	-
ARN	Topic owner
arn:aws:sns:ap-south-1:565435440617:testapp	565435440617
Type	
Standard	

Below the details, there are tabs for "Subscriptions", "Access policy", "Data protection policy", "Delivery policy (HTTP/S)", "Delivery status logging", "Encryption", and "Tags". The "Subscriptions (1)" tab is active, showing a search bar and buttons for "Edit", "Delete", "Request confirmation", "Confirm subscription", and "Create subscription".

Step 15 : 🎉 congratulations , wow party to Banta hai , message receive on Gmail ,

Do mistake , so that you learn

The screenshot shows a Gmail inbox. The email is from "AWS Notifications" with the subject "Thanku ji apaka Swagat hai". The email body contains the following text:

My name is Ashutosh kumar , i am a mern stack developer , see you soon bye....👋

Step 18 : fill the phone number and all require information

[Amazon SNS](#) > [Text messaging \(SMS\)](#) > Sandbox add phone number

Add a phone number

Add a destination phone number in SMS Sandbox in order to send a test message to the specified phone number.

Destination details

Phone number

 +91 70042-46315

The phone number can have up to 20 digits, with a leading '+' and no spaces or hyphens (-).

Verification message language

English (United States) ▼

The language the verification message will be sent in.

[Cancel](#) [Add phone number](#)

Step 19 : we received the verification code

 **New Feature**
Amazon SNS now supports in-place message archiving and replay for FIFO topics. [Learn more](#)

[Amazon SNS](#) > [Text messaging \(SMS\)](#) > Sandbox verify phone number

Verify phone number

Verify a destination phone number in SMS Sandbox in order to send a test message and verification code.

Details

Phone number

+917004246315

The phone number can have up to 20 digits, with a leading '+' and no spaces or hyphens (-).

Verification code

919320

Enter a string of 5-8 digits.

[Cancel](#) [Resend verification code](#) [Verify phone number](#)

Step 20 : Now we have to Type the Message

☰

WRITE PROMOTIONAL MESSAGES ARE NOT-CLUTED, TRANSACTIONAL MESSAGES ARE SENT WITH HIGH PRIORITY.

Promotional ▼

Destination phone number
The phone number to which to send the message.

Q +1 999 999 9999

Sandbox destination phone numbers
When in the sandbox, you can only deliver SMS to the sandbox destination phone numbers you have verified. [Learn more](#)

Add phone number

Message
SMS messages longer than 160 characters are treated as multiple messages.

👋 hello ji kaise hai aap log

31 characters (1 messages)

Origination identities
The origination identity is displayed on the recipient's device. Some countries require you to specify a valid and registered origination identity.

Sender ID [Info](#)
A custom ID, such as your business brand, displayed as the sender on the receiving device. Support for sender IDs varies by country.

Up to 11 alphanumeric or hyphen (-) characters, including at least one letter and no spaces. It has to start and end with an alphanumeric character.

Origination number [Info](#)
The number to send the SMS message from.

Step 21: congratulations our message receive on our phone numbers
