

Serverless Aws

1. What is the significance of Amazon Prime Video's shift from a monolithic architecture?
2. What does 'serverless' mean in the context of cloud computing?
3. What architectural shift did Amazon Prime Video make according to the video?
4. What does 'serverless' mean in the context of cloud computing?
5. What is the role of a developer in a traditional server-based architecture compared to a serverless architecture?
6. What are the benefits of using a serverless architecture compared to traditional architecture?
7. What is a key benefit of using serverless architecture?
8. How does serverless architecture impact pricing for applications?
9. What is the cost structure of serverless computing based on invocation?
10. How does serverless architecture handle code execution during user requests?
11. What happens to serverless functions when the number of users increases?
12. What is the significance of the 'sleep state' in serverless computing?
13. What is a notable limitation of serverless architecture?
14. Why might the speed of serverless architecture be a concern for developers?
15. What is a 'cold start' in serverless computing?
16. Why can cold starts be problematic for serverless applications?
17. What is the main benefit of using serverless architecture?
18. What is a common framework mentioned for managing deployments in serverless architecture?
19. What is the significance of Amazon Prime Video's shift from a monolithic architecture?
20. What architectural shift did Amazon Prime Video make according to the content?
21. What is the general sentiment expressed about serverless architecture in the content?
22. What is the primary difference between serverless architecture and monolithic architecture?
23. Why might a developer choose serverless architecture over a monolithic approach?
24. What does 'serverless' mean in the context of cloud computing?
25. What is the primary difference between serverless and traditional server-based architectures?
